# WebMon Web-based Configuration Software

WebMon™ is a free software tool that enables you to securely access and edit hardware and system settings on Model 5200 and 5300 controllers over the Internet. Simply type in an address for your controller and you can set up or reconfigure functions such as communications, downloads and uploads, or program control. Below is a basic list of functions you can do with WebMon:

Controller Setup
- Assign group and controller names
- Ethernet network settings
- Serial port settings
- Configure real-time clock
- Time Synchronization to Network or Server

Status
- Check hardware and firmware revisions
- Monitor threads and memory usage

Security
- Authentication
- Set up passwords
- Groups with IP address filtering

Email
- Create / Edit New Email Templates
- Create emails to be sent by controller
- Manage email files
- Controller email configuration

Program control
- Controls Quickstep, scripts, and 'C' programs
- Upload and download
- Start and stop execution
- Disk and file management
- Create and resize drive partitions
- FTP file transfers
- Upload and download files

Monitoring
- Create and save multiple monitor windows
- Display multiple monitor windows from one or more controllers
- View and/or change resource values
- Print monitor window display
