

WHAT ARE YOU CONTROLLING THIS SUMMER? READ WHAT WE'VE BEEN DOING>>

SOLVED PROBLEM

Modbus simultaneous client and server

Modbus has proliferated to the point where it's common to have to connect to multiple Modbus devices in a single application. Occasionally, though, the controller must play both the role of client and of server, as when talking to both a supervisory controller and a low-level device.

TECHNOLOGY

iPad and iPhone as In-Plant Monitoring Tools

Small, light and portable - these advantages of smartphone and pad technologies are now available as industrial automation tools with the introduction of qMon, a comprehensive monitoring and configuration app.

SOLVED PROBLEM

New composites make modern wind turbines possible

Ever wonder why current wind turbines don't look like the traditional Dutch windmills of the 18th century? Modern composite materials are the reason, which are only made possible by complex high-speed motion control strategies.

TECHNOLOGY

High-speed Communications for Machines and Processes

Technology-based industries often require massive amounts of data transfer from a control system. A new way to optimize these transfers has resulted in great throughput improvements without resorting to specialized networking hardware.
