

DECEMBER 2012 EDITION

*Best wishes for a healthy
and prosperous New Year!*

SOLVED PROBLEM

Polymer mixing without the worries

One controller to rule them all... When New Jersey-based Advanced Process Technology wanted a single system to control its metering, mixing, and potting machine, the company needed a controller to manage servomotors, VFD, and over 10 PID loops.

TECHNOLOGY

BACnet spoken here

CTC's model 5300 supports direct communication (server or client) with BACnet/IP. As a server an external BACnet/IP client can access virtually any public variable or I/O within the controller as an object, either for monitoring or modification.

SOLVED PROBLEM

Check out CTC's YouTube Channel

Since a picture is worth a thousand words, a moving picture is probably worth at least double that! We regularly add practical videos to help you make the most of CTC's big toolbox. Recently added: How to use the CTC Load Utility to save your registers and program before making controller hardware changes.
